PER- AND POLYFLUORINATED SUBSTANCES (PFAS) SERVICES CAPABILITY STATEMENT

PFAS are a diverse group of human-made chemicals used in a wide range of consumer and industrial products. PFAS can be present in our drinking water, food sources, environment, fire extinguishing foams, personal care products, and biosolids. These chemicals do not breakdown easily and some types have been shown to accumulate in the environment and in our bodies over time. Recent studies have shown that exposure to evaluated levels of PFAS may lead to reproductive effects, developmental delays in children, weakened immune system, and increased risk to certain types of cancers. Conventional water and wastewater treatment processes do not effectively remove PFAS.

ACT E2S offers a multitude of services for the testing and remediation solutions for PFAS contaminants.

WHAT SERVICES WE PROVIDE:

- PFAS Sampling and Analysis for Drinking Water/Non-Drinking Water Sources
- PFAS Remediation
- PFAS Removal
- Designing Treatment Options
- Implementing Treatment and Remediation Procedures

PAST PERFORMANCE
